

ABSTRACT

The present invention provides an indoor unit (1) of an air conditioner whose aesthetic look can be improved. The indoor unit (1) of the air conditioner is disposed with an indoor unit casing (2), a horizontal flap (3), and a front panel (4). The indoor unit casing
5 (2) includes an outlet (20) through which air is blown into a room. The horizontal flap (3) is disposed so as to freely open and close the outlet (20) and guides the air blown out through the outlet (20). In a closed state, the front panel (4) covers at least part of the indoor unit casing (2) and at least one end of the horizontal flap (3) closing the outlet (20).
